

ARCTIC SURVIVOR GLOVES

Need a semi-dry diving glove that will work in harmony with your drysuit, semi-dry or wetsuit, above and below the surface?

Our Arctic Survivor 'Superstretch' 5mm neoprene gloves are suitable for a wide range of diving conditions where you want to keep your hands warm and your gloves securely in place for the duration of the dive.

Unique Neotex wrist seals on the Arctic Survivor 'Superstretch' gloves form a 'water lock' system. The seal works in the same way as a neoprene neck seal on any Northern Diver drysuit. When the gloves are donned, the neoprene outer seal should be turned outwards. The Neotex inner seal will now be exposed. The Neotex inner seal should be inverted at half way so that the 'smooth skin' side is in direct contact with your skin, forming the water tight seal. The outer seal can then be flipped back over to protect the inner seal and keep your gloves in place when worn with a drysuit, semi-dry or wetsuit.

This seal system on our Arctic Survivor 'Superstretch' gloves ensures no flush from the gloves, keeping your hands warm and making every dive more pleasurable.

The 5mm 'Superstretch' neoprene construction of the gloves ensures a comfortable, close fit for optimal dexterity; whether you are mid-dive or out of the water setting up your diving equipment. A 'Supa-Grip' textured finish on the palms of the gloves provides additional support.

- Neoprene thickness: 5mm
- 'Superstretch' neoprene
- Unique Neotex wrist seals with outer, protective seal
- 'Supa-Grip' finish on the palms for additional support
- Reinforced 'Strobel' stitched seams
- Available in black
- Can be used in conjunction with any Northern Diver drysuit, semi-dry or wetsuit
- Sizes available S, M, L, XL
