

2.0MM MARLIN HYDRO-GLIDE NEOPRENE SWIM GLOVES

The body's extremities always feel the cold the most, so the main goal of the Marlin open water swimming gloves is to keep your hands insulated from the cold making off season and chilly swims more comfortable.

Our water sport gloves can be tucked over or under the wetsuit, ensuring there is no exposed skin and have been designed to be a tighter fit to prevent water ingress. With minimal panel design to increase performance, these lightweight and flexible gloves are ideal for colder days.

The outer glove is unlined exposing the Hydro-Glide skin neoprene ensuring you travel through the water with minimal drag. Constructed with a long wrist for a great seal and minimal water entry when worn without a wetsuit.
